Final Project: Overview

Estimated time needed: 1.5 hours

The final project for this course has several steps that you must complete. To give you an overview of the whole project, the high-level steps are listed below.

Project Breakdown

Part A: Deploy the Python application

1. Open a Code Engine CLI and deploy the application in the repository https://github.com/ibm-developer-skills-network/dealer_evaluation_backend.git in the directory `products_list`.

2. In the Code Engine CLI deploy the application in the repository https://github.com/ibm-developer-skills-network/dealer_evaluation_backend.git in the directory `dealer_details`.

Part B: Deploy the front-end application

1. Clone the repo https://github.com/ibm-developer-skills-network/dealer_evaluation_frontend.git.

2. Make changes to the index.html file by replacing the placeholder URLs with the deployment URLs obtained in the Part A of the project.

3. Deploy the frontend, and load the home page. Choose a product and dealer and get the price. Get the price for all dealers of a product.

Submit your project for Grading

To submit your project for grading you need to take a few screenshots and submit it as a part of the final assignment. The details of the screenshots are in the next section.

Next Steps

To complete the project, follow the step-by-step instructions.
